# 303727-2 TABLE I TABLE I

Mnemonic	Size	Description
Data Addr	16b	FrameStore Location of data (DIB) portion of frame. If Data Addr=0x0000, DIB is in G-FIFO.
DSLTL	3b	DSLTL is actually the 3 low-order bits of Data Addr. If DSLTL=0x0, the DIB is in G-FIFO. If DSLTL=0x1 thru 0x7, the DIB is in the corresponding FrameStore slot.
Data Len	11b	Length of data (DIB) portion of frame. Does not include frame header or Escon CRC.
FStatus	8b	<div> <div> <div>0</div> <div>1</div> <div>2</div> <div>3</div> <div>4</div> <div>5</div> <div>6</div> <div>7</div> </div> <div> <div>ERROR</div> <div>Full</div> <div>0</div> <div>EOF</div> <div>SOF</div> </div> </div> <p><b>ERROR:</b></p> <p>0000 = No Error</p> <p>0001 = CRC Error</p> <p>0010 = Control character received in frame</p> <p>0011 = Invalid character received in frame</p> <p>0100 = Maximum size of frame exceeded</p> <p>0101 = Frame reception ended by 2 IDLE characters</p> <p>0110 = Frame reception ended by ABORT delimiter</p> <p>0111 = Frame reception ended by Invalid EOF delimiter</p> <p><i>The following errors cause Frame Reception to stop</i></p> <p>1000 = Frame reception ended by LOS detection</p> <p>1001 = Frame reception ended by Sequence detection</p> <p>1010 = Frame reception ended by SOF delimiter</p> <p>1100 = Frame reception ended by G-FIFO overflow</p> <p><b>Full:</b> 1=This frame caused the FrameStore header section to become Full.</p> <p><b>EOF:</b> 0=PEOF detected; 1=DEOF detected</p> <p><b>SOF:</b> 0=PSOF detected; 1=CSOF detected</p> <p>CRC covering DIB of received frame. Only valid for Device-frames independent of whether the DIB goes to FrameStore or G-FIFO.</p>
SCRC	8b

Mnemonic	Size	Description	Notes
EnXfr	1b	1=Enable Transfer	
DIR	1b	1=Write (Line to DPR) 0=Read (DPR to Line)	
EnDSP	1b	1=Enable disparity generator	
wCRC	1b	1=Enable appending CRC to end of data	
FF	1b	1=Flush FIFO	
PAD	1b	1=Enable 0 padding through ADT pipe	
Acrc0-Acrc7	8b	Accumulated CRC for current transfer	
XC0-XC15	16b	Number of bytes to transfer	Readback gives # of bytes remaining to transfer

# TABLE XII

Mnemonic	Size	Description	Notes
TL0-TL13	14b	Number of DWords to read or write	
MIR	1b	1=Mirror all Global Memory writes to the Mirror Address given in the Mirror Address Pointer	
COPY	1b	1=Perform a true DMA operation; Reads occur from the primary Address Pointer, Writes are destined for the Copy Address Pointer; Transfer length is given by TL0-13.	RW must be set; SVC&MIR are illegal; XOR may be used
FP	1b	Middle Machine First Pass internal arbiter bit	Must be set to '1'
IEC	1b	Middle Machine Internal Enable Channel	Must be set to '1'
FE	1b	1=Fatal Error Occurred During Transfer	
EOT	1b	1=End Of Transfer has occurred	When Read
RW	1b	1=Force End Of Transfer protocol in Middle Machine 1=Read 0=Write	When Written
XOR	1b	1=XOR the new data with the current data in Global Memory, then store the result in Global Memory	Only valid for Writes with or without Mirror
SVC	1b	1=Backplane cycles will be initiated as Service Cycles	
LOCK	1b	1=Lock Memory	
RSVD	1b	Reserved Command bit	Must be set to '0'
SPAR	1b	Backplane SPARE bit	Must be set to '0'
EC	1b	1=Enable Channel 0=Disable Channel	An interrupt will be generated after the Middle Machine completes current pass

Mnemonic	Size	Description	Notes
ERR	1b	1=An Error Occurred during the transfer	
CTMS	1b	1=Count Miss occurred	
ETNZ	1b	1=Ending Transfer Count Not Zero error occurred	
UEC0-1	2b	Upper Error Codes	See table below
MPE	1b	1=Machine Parity Error occurred (CPU Parity Error / Internal Parity Error)	
INITS	1b	1=Global Memory reported Initial Status	
CC0-CC3	4b	Ending Global Memory Condition Codes	0101=good status
LEC0-2	3b	Lower Error Codes	See table below
DMC	1b	1=DMA Operation Completed	
UP0-UP7	8b	Upper Machine DPR Pointer	
LP0-LP7	8b	Lower Machine DPR Pointer	

## M0/M1 Condition Codes:

Condition Code	Meaning	Notes
0101 (5)	Good Ending Status (No Errors)	
1001 (9)	Protocol Error	
1110 (E)	Count Miss	
1000 (8)	R/W Mismatch	
1010 (A)	Multi-bit Error	
0011 (3)	Single-bit Error	
0111 (7)	Memory Internal Error	
1101 (D)	More Than One Ending Status Error	

## Upper Error Codes:

Code	Meaning
00 (0)	No Upper Machine Hardware Errors
01 (1)	Short Timeout Occurred
10 (2)	Long Timeout Occurred
11 (3)	Lock Timeout or Upper Machine Command Parity Error Occurred

## Lower Error Codes:

Code	Meaning
000 (0)	No Lower Machine Hardware Errors
001 (1)	Single-Bit EDAC Error Detected
010 (2)	Reserved
011 (3)	Multi-Bit EDAC Error Detected
100 (4)	Parity Error detected on SDIO bus
101 (5)	Reserved
110 (6)	Illegal Lower Machine/ASMD Transfer Size Detected
111 (7)	ASMD Lower Machine Command Parity Error
